■ – Airflow outside 450 cfm/ton.

**NOTES:**

- Airflow based upon dry coil at 230v with factory-approved filter and electric heater (2 element heater sizes 018 through 036, 3 element heater sizes 42 – 48). Airflow at 208 volts is approximately the same as 230 volts because the ECM motor is a constant torque motor. The torque doesn't drop off at the speeds the motor operates.
- To avoid potential for condensate blowing out of drain pan prior to making drain trap:  
Return static pressure must be less than 0.40 in. wc.  
Horizontal applications of 42 – 48 sizes must have supply static greater than 0.20 in. wc.
- Airflow above 400 cfm/ton on 48 size could result in condensate blowing off coil or splashing out of drain pan.

**STATIC PRESSURE CORRECTION FOR ELECTRIC HEATERS (inches of water column)**

Airflow performance chart was developed using fan coils with 10 kW electric heater (2 elements) in the 18 – 36 model sizes, and 15 kW electric heaters (3 elements) in the 42 – 60 model sizes.

When using a different number of heater elements, adjust the static pressure numbers by adding or subtracting the values in this table (for a given CFM, more electric heater elements create higher static pressure drop).
